Vaccinated English adults under 60 are dying at twice the rate of unvaccinated people the same age

And have been for six months. This chart may seem unbelievable or impossible, but it's correct, based on weekly data from the British government.

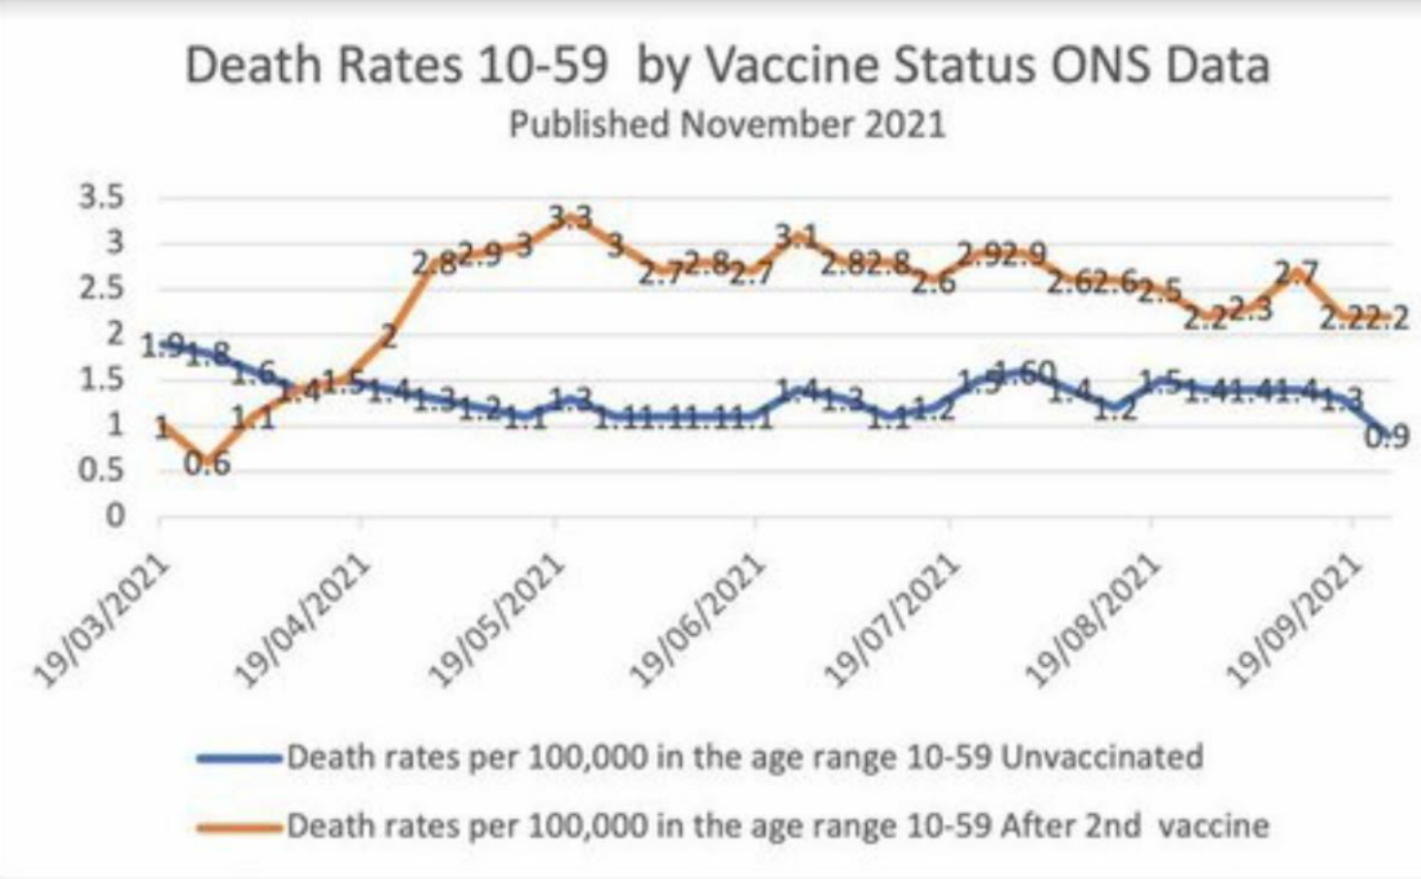
The brown line represents weekly deaths from all causes of vaccinated people aged 10-59, per 100,000 people.

The blue line represents weekly deaths from all causes of unvaccinated people per 100,000 in the same age range.



I have checked the underlying dataset myself and this graph is correct. Vaccinated people under 60 are twice as likely to die as unvaccinated people. And overall deaths in Britain are running well above normal.

I don't know how to explain this other than vaccine-caused mortality.

The basic data is available here, download the Excel file and see table 4:

One reason not to draw too much of a conclusion is that 10 to 59 is a really, really broad age group, and the underlying death rate at the top of that group will be much higher than at the bottom.

If the vaccination is also unevenly distributed in that group (and you would imagine the vaccination rate to be much lower among 10 year-olds than 59 year-olds) that would probably provide a sufficient explanation.

Before everyone piles on, I am opposed to mass vaccination, to mandates, to (most) child vaccination against Covid, and all the fascist tyranny being imposed on the back of this slightly worse than normal respiratory disease. It's just that I work in clinical research and we come across all the time things like this that look like something but very often aren't when you dig deeper.

Those of us pushing back need to be scrupulously careful with data and the analysis thereof, the exact opposite of what the propagandists do.

"The unvaccinated are literally murdering the vaccinated!!!"

Well, now you know why they want to seal the Pfizer test results for 55 years.
